HEMANTH M

Software Developer | DSA Mentor

hemantham015@gmail.com | +91 63626 59789 | Mysuru, Karnataka | github.com/AnuragHemanth

PROFESSIONAL SUMMARY

Software developer and DSA mentor (B.E. Information Science) who teaches data structures and algorithms by building real software. Hands-on experience with Python data pipelines, REST services, SQL and NoSQL databases, debugging, and data-quality validation. Writes testable, maintainable code and uses metrics (latency, accuracy) to support engineering decisions. Solve 250+ DSA problems and has coached students and freshers through coding practice, debugging exercises, and mock interviews. Looking to grow in cloud, data, and telemetry-driven engineering.

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript (ES6+), SQL
- **Data Structures & Algorithms:** Problem solving, complexity analysis, OOP, design patterns, mentoring and mock interviews
- **Data & Services:** Python data pipelines, REST APIs, Node.js, Express.js, MongoDB, MySQL, schema design and query optimization
- **ML & Analytics:** TensorFlow, Keras, LSTM time-series forecasting, data preprocessing, feature engineering, model evaluation
- **Engineering Practices:** Unit/API testing (Postman), debugging, SDLC, Agile/Scrum
- **Tools:** Git/GitHub, Linux, Render (deployment)

EXPERIENCE

DSA Mentor & Technical Trainer — Corporate & Campus Programs

- Mentored students and freshers in data structures and algorithms, helping them approach problems step by step, reason about time and space complexity, and debug their solutions.

- Trained learners in Java, Python, SQL, Spring Boot, and the MERN stack through hands-on coding, debugging exercises, and mock interviews.
- Connected DSA concepts to real software work, so learners could apply them in projects and technical interviews.

AIML & Web Developer Intern — Spherenex

- Built and debugged MERN web features and backend APIs in Agile sprints; tracked defects from report to resolution.
- Automated data preprocessing pipelines in Python, cutting manual effort on repetitive data-validation tasks.
- Integrated ML models with backend services through REST APIs for real-time use and verified response correctness.

PROJECTS

Speech-to-Speech Translation System | Python, Deep Learning

- Built a modular ASR, translation, and TTS pipeline; validated each stage independently and end to end.
- Measured inter-service latency and accuracy, then optimized audio preprocessing to improve latency.

LSTM Stock Price Prediction | Python, TensorFlow, Keras

- Built an LSTM time-series forecasting model with data-quality checks, feature engineering, and validation on held-out data.
- Investigated accuracy deviations to find root causes.

Wanderlust Web Application | MERN Stack, Render

- Built a full-stack app with authentication, CRUD, REST APIs (Express.js), and MongoDB; deployed on Render.
- Wrote test cases for CRUD and auth flows and documented defects with replication steps.

EDUCATION

B.E. Information Science Engineering — MIT Mysore | CGPA: 8.44 / 10

ACHIEVEMENTS

- 2nd Place, HackFusion 1.0 Hackathon; attended the AI Workshop at IIT Hyderabad
- 100+ DSA problems solved on LeetCode | Languages: English, Kannada, Hindi
